DETAILED ACTION

1. This is the First Office Action on the Merits from the examiner in charge of this application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5-6, and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 5, “the first and second latch levers” lacks antecedent basis. Claim 6, line 1, “the auxiliary latch actuator” also lacks antecedent basis. Claim 9, the limitation of the spring “is not substantially moved toward the unlocked position when the first spring is released” is indefinite for failing to clearly define the metes and bounds of the claimed invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, 5, and 8-9 are rejected under 35 U.S.C. 102(e) as being anticipated by USP 6,554,379 to Devine.

Art Unit: 3637

Devine discloses a latch and release mechanism comprising first and second slide channels, a first cantilevered spring member 124, a stop lug, a release lever 54, wherein the latch levers are flexible thin metallic elements, the release lever is reset to its ready position when the slide assembly is closed.

6. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by USP 6,373,707 to Hutchins.

Hutchins discloses a latch and release mechanism comprising all the elements recited in the above listed claims including, such as shown in Figs 8-10, first and second cantilever spring members 178, 186 mounted on the first channel each having a free end for engaging a stop lug, a release lever 166, an auxiliary release member 152, wherein the latch levers are flexible thin metallic elements, both spring members are in locked or interfering mode with the lug when in an unactuated state, the release lever 166 is reset to its ready position when the slide assembly is closed.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Weng, Yang, Schenk, Tomlinson, Amann, and Couppey all show structures similar to various elements of applicant's disclosure.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hanh V. Tran whose telephone number is (703) 308-6302. The examiner can normally be reached on Monday-Thursday, and alternate Friday.
